

ABOUT US

Kumpan Electric (e-bility GmbH) is an international operating company in the field of electric mobility, combining classic vehicle design with sustainable, innovative technology. Founded in 2010 by brothers, Patrik, Daniel and Philipp Tykesson in Remagen near Bonn, the company has a dedicated team of 65 employees.

Our product portfolio includes electric pedal and motor scooters, sharing solutions for micro-mobility as well as portable and universally applicable energy storage systems. Our E-Scooters are designed, developed and produced in Germany with a range of up to 186 kilometres under optimal conditions (this compares to a range of up to 62 km per battery according to test standard EVE 134/2014).

In addition to our customer business, Kumpan is also active in the B2B sector: Kumpan scooters and its technology are used as white-label solutions by companies who benefit from using the scooters as their own company fleet or as public e-Scooter sharing. This primarily includes utility companies or energy providers such as 'Energieversorgung Oberhausen', 'Stadtwerke Tübingen' and 'Stadtwerke Krefeld'.

Kumpan electric consistently works on developing their technology, currently focusing on the exchangeable, intelligent battery system - our other unique selling point!

The AI-controlled plug-and-play solution has an easily removable design and can be charged at a standard socket with the potential to be used for a wide range of products from power tools to lawnmowers. The e-bility shareholders include '4Lvision', 'EIT innoenergy' and the former Tesla manager and current Northvolt CEO, Peter Carlsson.

At the end of 2019, the Remagen team made its first acquisition and succeeded Kumpan's scooter brand 'Scrooser' from Berlin. With even bigger plans for the future, Kumpan Electric is available in Germany, France, Spain, the Netherlands, Belgium, Greece, Austria, Switzerland, the USA and Canada.
